Title: Teaching Programming to Beginners Through Short Educational Videos

This submission describes a YouTube channel focused on helping beginners learn programming. The creator publishes weekly videos explaining JavaScript, Python, and web development in a simplified format. Each video includes practical examples and mini projects.

The goal of the channel is to support students who are learning technology independently. Many viewers are college students working on software engineering projects. The creator encourages open discussion in comments and organizes live sessions where viewers can ask questions about coding problems.

Impact: The channel helps learners understand technical topics without expensive courses. It promotes digital education and encourages collaborative learning in the online community.
